Paweł Kajanek

Frontend Developer

I'm a frontend developer with **4+ years** of experience who is passionate about creating useful tools. Through my career I developed strong analytical skills and my appetite for learning new technologies has only grown. That transfers to my private life, as in my free time I enjoy solving puzzles and building fullstack apps for my own daily usage. In the future I aim to become more of a fullstack developer professionally as well.

Work Experience

Frontend Developer
STX Next

May 2022 - till now

Description:

During my work with STX Next I've been involved in several projects for international clients. Most of them required me to work as a solo frontend developer with a broad spectrum of responsibilities spanning from refining tasks and creating roadmaps, to developing and debugging the application.

Responsibilities:

- Reviewing issues and recommending possible solutions
- Assessing workload and creating development plans
- Creating various widgets for data display, preference customization and query applying, that match designs
- Utilizing REST API endpoints
- Migrating widgets from Backbone.js to React.js
- Creating automated tests for UI components
- Introducing a new library and adapting its components in an existing project
- Identifying areas for improvements and preforming app-wide refactors
- Fixing various frontend bugs
- Reviewing peer written code
- Developing products with agile methodologies

Highlighted technologies:

`React.js` `Vue` `Material UI` `Ant Design` `Mantine` `Highcharts` `ReactQuery` `Cypress` `Playwright`

Languages

- Polish (Native)
- English (C1)

Hobbies

- Live music
- Board games
- Sailing
- Logic puzzles
- Skateboarding
- Fantasy / Thriller / Detective Books

Frontend Developer - Intern
ULAN Software
September 2021 - November 2021

Description:

At ULAN Software I've been working on a project called BOWWE, which is a tool for creating professional business sites, resumes and portfolios. The app uses drag-and-drop interface and contains a wide range of configurable widgets, making it beginner friendly. Additionally it takes care of responsiveness, translations, SEO and has marketing tool integrations.

Responsibilities:

- Creating "User Dashboard" page, which displayed user's social profile and portfolio
- Writing minor API endpoints providing data for "User Dashboard" components
- Migrating "Pricing" page from Vanilla to Vue
- Fixing various frontend bugs
- Reviewing peer written code
- Developing the product with an agile methodology

Highlighted technologies:

`Vue.js` `jQuery` `PHP`

Education

Wroclaw University of Technology
September 2018 - February 2022

Achieved Title: **Bachelor**
Field: **Algorithmic Computer Science**
Score: **5.0**

Private Projects

Party Finder 2
App for finding common bands that play at festivals among small group of friends. Written using Django and React.

Advent of Code
Repository storing my solutions for "Advent of Code". Written using Python, C# and Go.

Claymore Roomba
Web browser implementation of "Minesweeper" game, build to explore automated solver. Written using React.

Interval Timer
A web app build for customizing tabata circuit training. Written using Vue.
