Paweł Kajanek

Frontend Developer

I'm a young frontend developer with 3 years of working experience. In my previous jobs I took part in creating new features as well as migrating and fixing the existing ones using React and Vue. The projects I worked on were managed mainly with agile methodologies. In the future I aim to continue developing my frontend skills, but also to start learning backend skills and technologies, and become more of a Fullstack Developer.

Work Experience

Frontend Developer

STX Next

May 2022 - till now

Responsibilities:

- Creating form pages with input validation (FE and BE)
